AIS

AFTERMATH INSPECTION SERVICES

Request it from the job. Get the result in your app.

Inspections when you're ready, not the next day.

Private provider inspections for a few select licensed contractors, run from your phone.

BY INVITATION · FLORIDA KEYS

WHY THIS IS DIFFERENT

When you're ready, not the next day

THE USUAL WAY

Call it in before the cutoff. Wait for the next business day. Your crew sits, or comes back.

WITH AIS

Work is ready? Request it from the job with photos. I review it and get it inspected while your crew is still there.

Plumbers · Roofers · Window and door installers · Mechanical change-outs: air handlers and condensers

HOW IT WORKS

One inspection, start to finish

1

Request

You punch it in from the job and add photos.

2

Alert

My phone goes off the second you hit Send.

3

Scheduled

I confirm it, and your app shows the date.

4

Review

I check the work against the code, with your photos.

5

Result

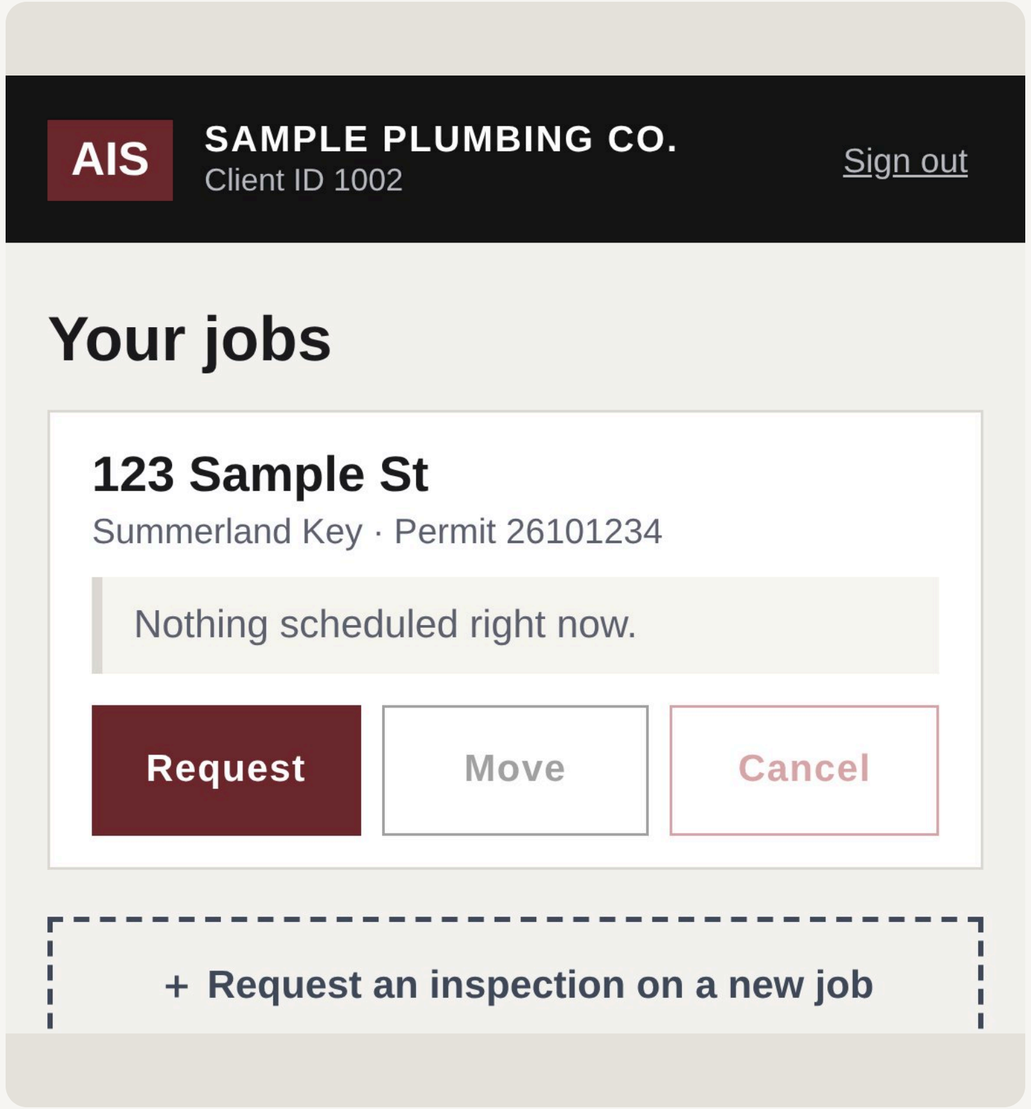

Pass, or corrections with the code section, right in your app.

YOUR SIDE · YOUR APP

Every job you have with me, in one place

You sign in once with your Client ID and PIN and put it on your home screen like any app. iPhone or Android.

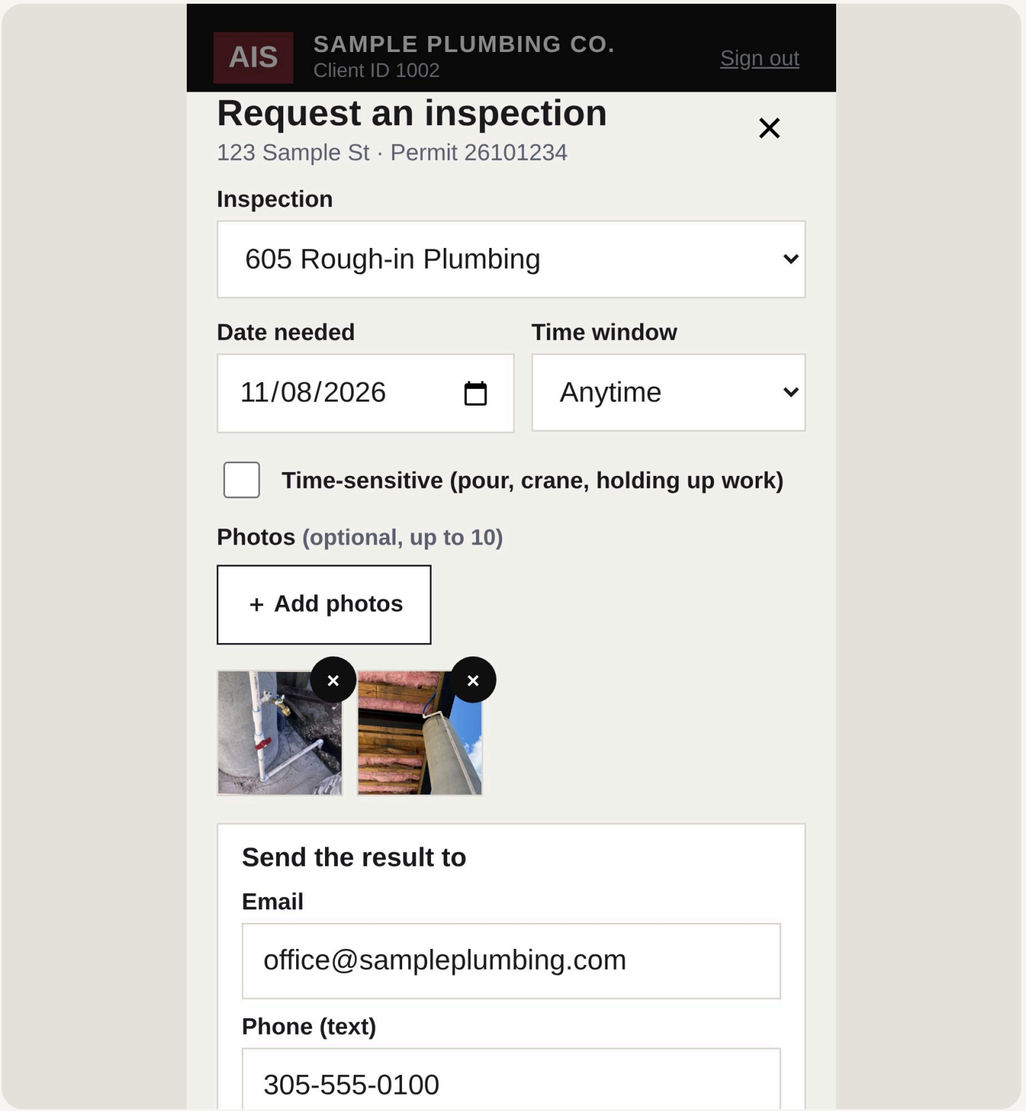

Each job shows what’s next, plus **Request**, **Move** and **Cancel** buttons.

STEP 1 · REQUEST

Rough-in is ready. Punch it in from the job.

- Pick the inspection from the list
- Pick the day and time window
- Check **Time-sensitive** if it’s holding up work
- Snap up to 10 photos of the work: lines, valves, fittings, trench
- Choose where the result goes: email and text

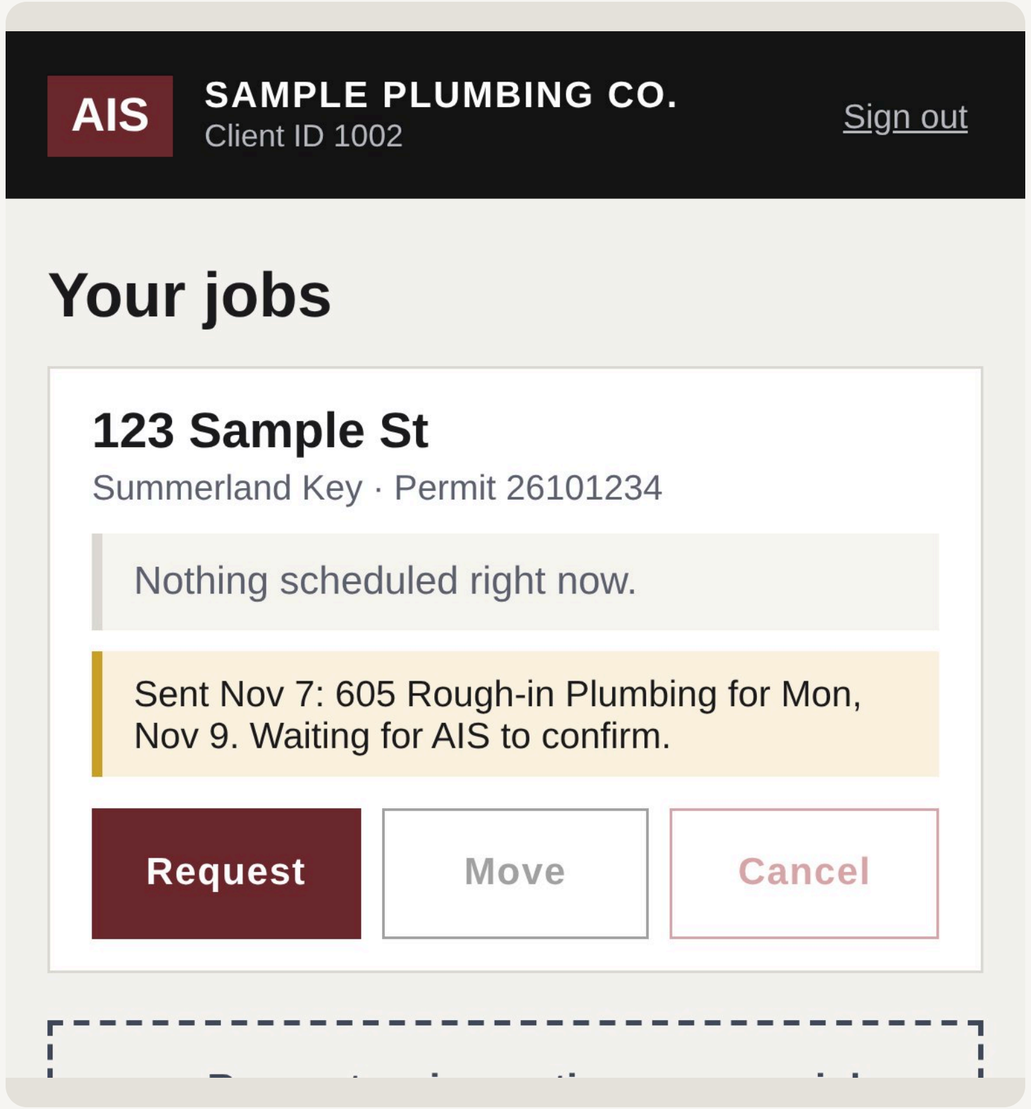

STEP 2 · SENT

You see it went through. I get an alert right away.

Your job card shows the request with **Waiting for AIS to confirm**, so you never wonder if it went through.

At the same moment, my phone lights up with your request.

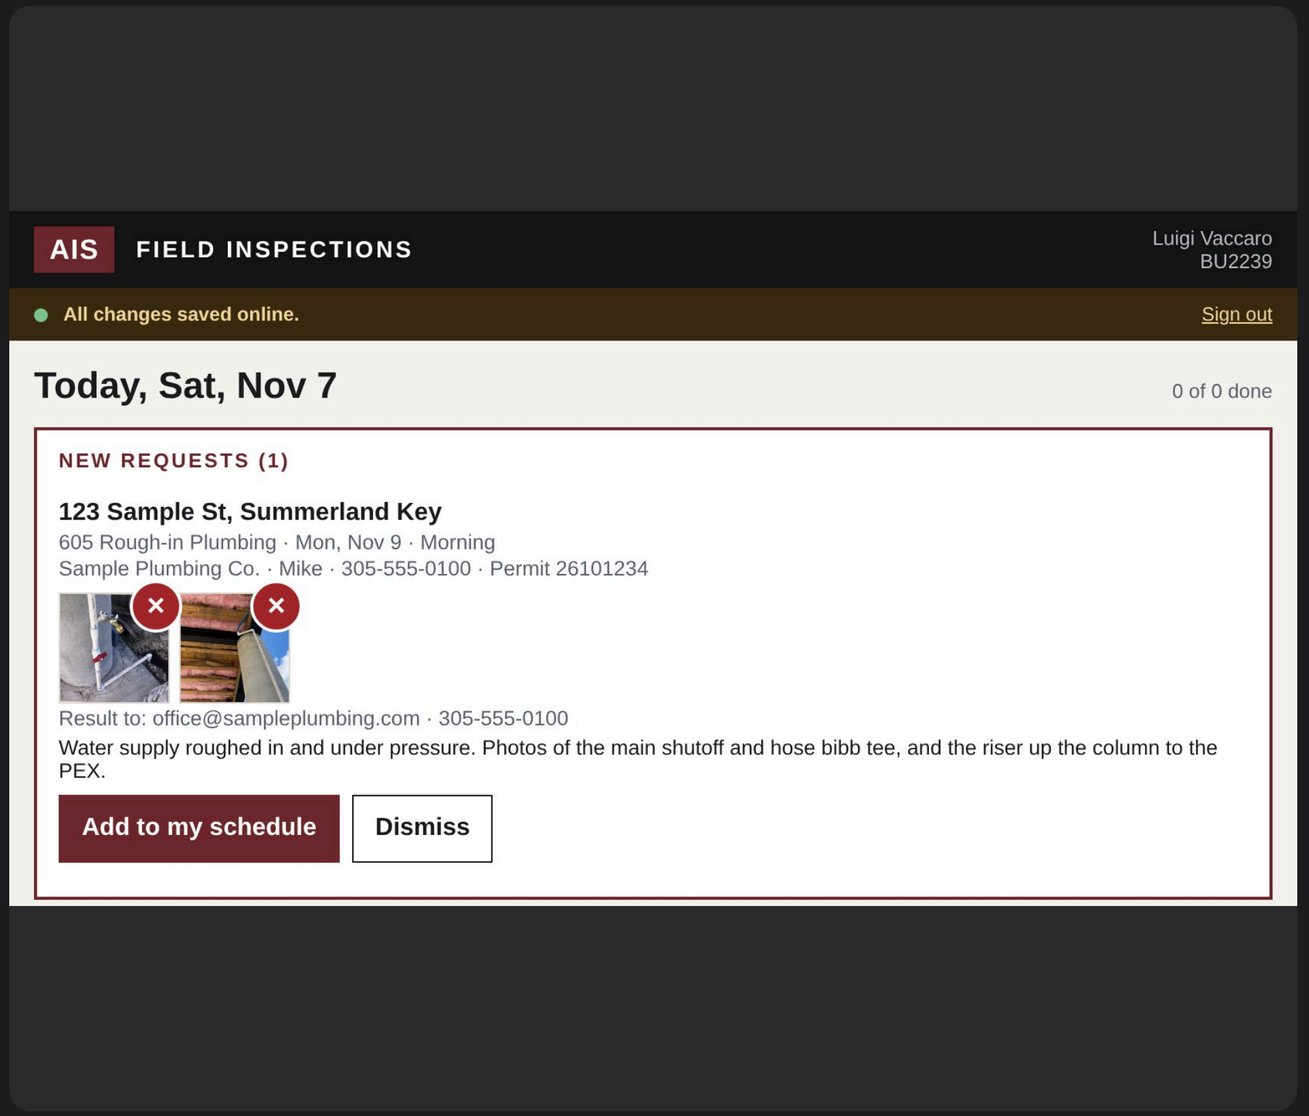

MY SIDE · THE REQUEST LANDS

Everything I need on one card

The address, permit, inspection, your photos, your notes and where to send the result.

One tap on **Add to my schedule** puts it on my route.

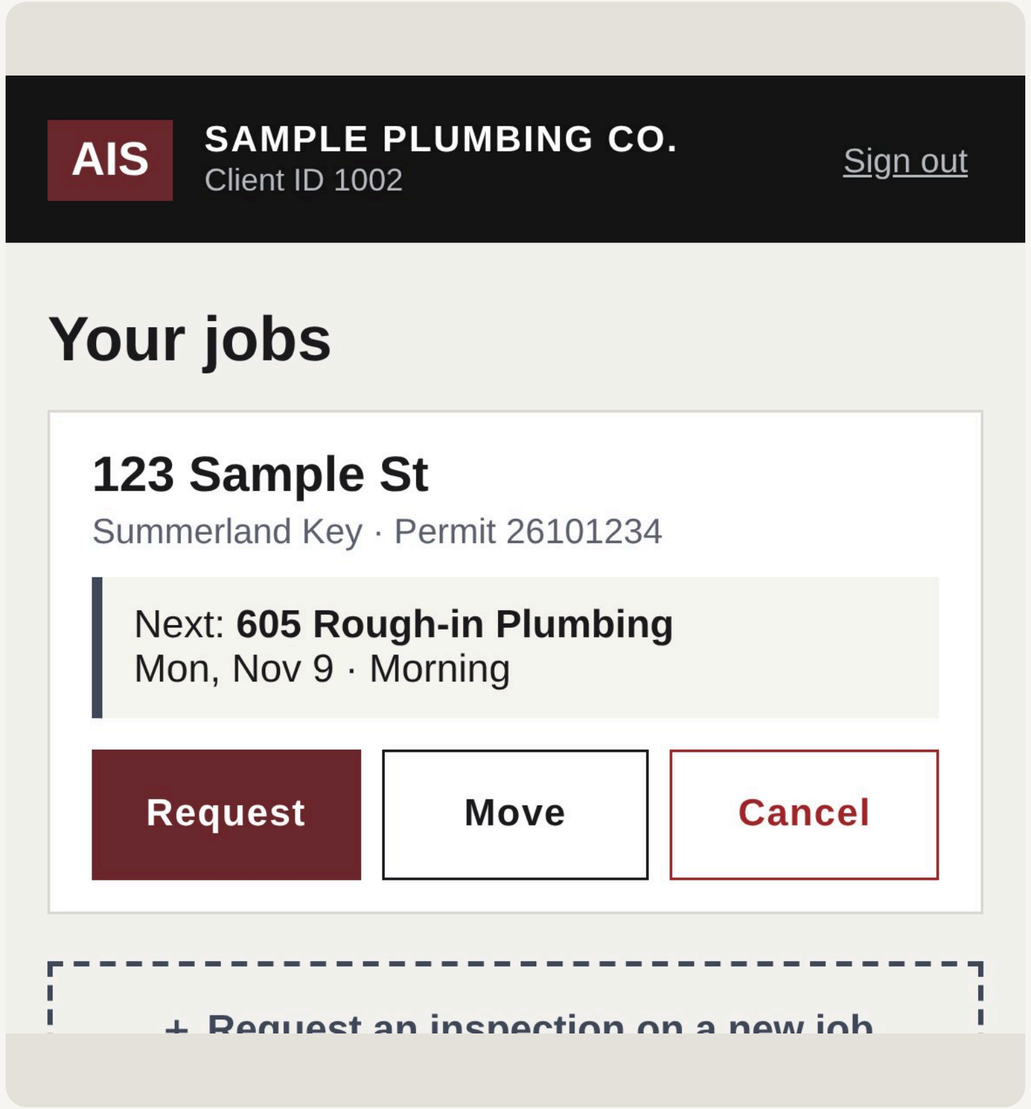

STEP 3 · SCHEDULED

Your app shows it’s on the schedule

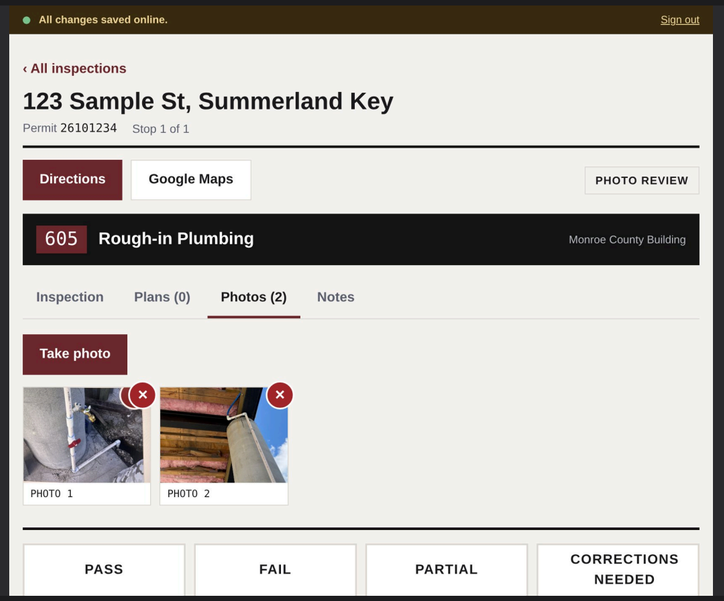

Open the app and your job card shows **Next**, the inspection, the day and the window.

Plans changed? Tap **Move** or **Cancel** right there.

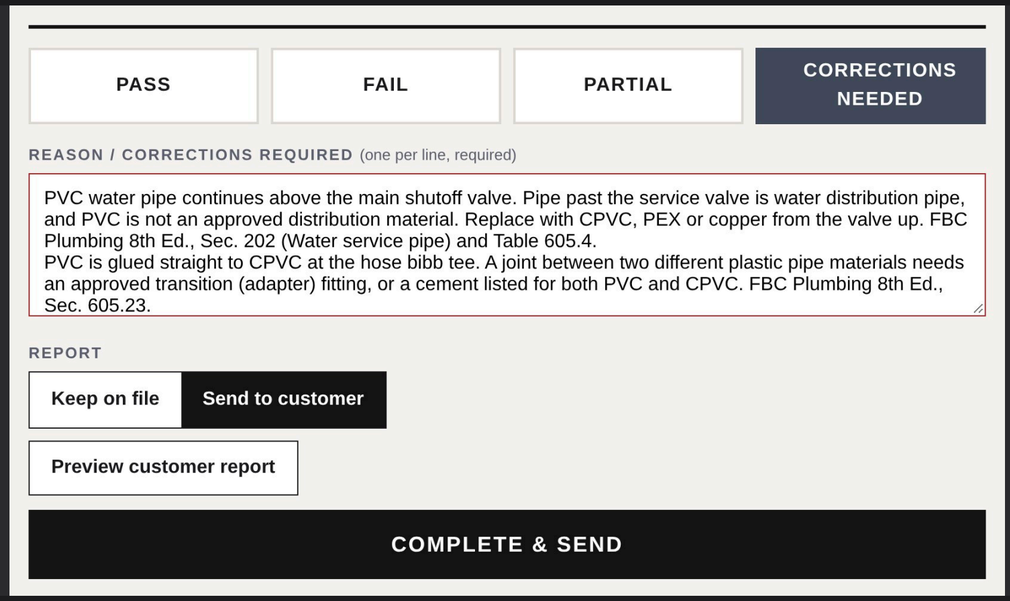

STEP 4 · REVIEW

Your photos ride with the inspection. I write the result.

Your photos are already on the inspection, numbered for the report.

Here: PVC past the shutoff. I mark **Corrections Needed** and write each item with its code section.

WHAT THE PHOTOS SHOWED

Two photos, two corrections

PHOTO 1 · CORRECTION 2

Hose bibb tee: PVC glued straight to CPVC, with no transition fitting.

PHOTO 2 · CORRECTION 1

Riser: PVC runs past the shutoff, all the way up the column to the PEX.

STEP 5 · RESULT

Corrections land in your app, with the code

1. PVC past the main shutoff

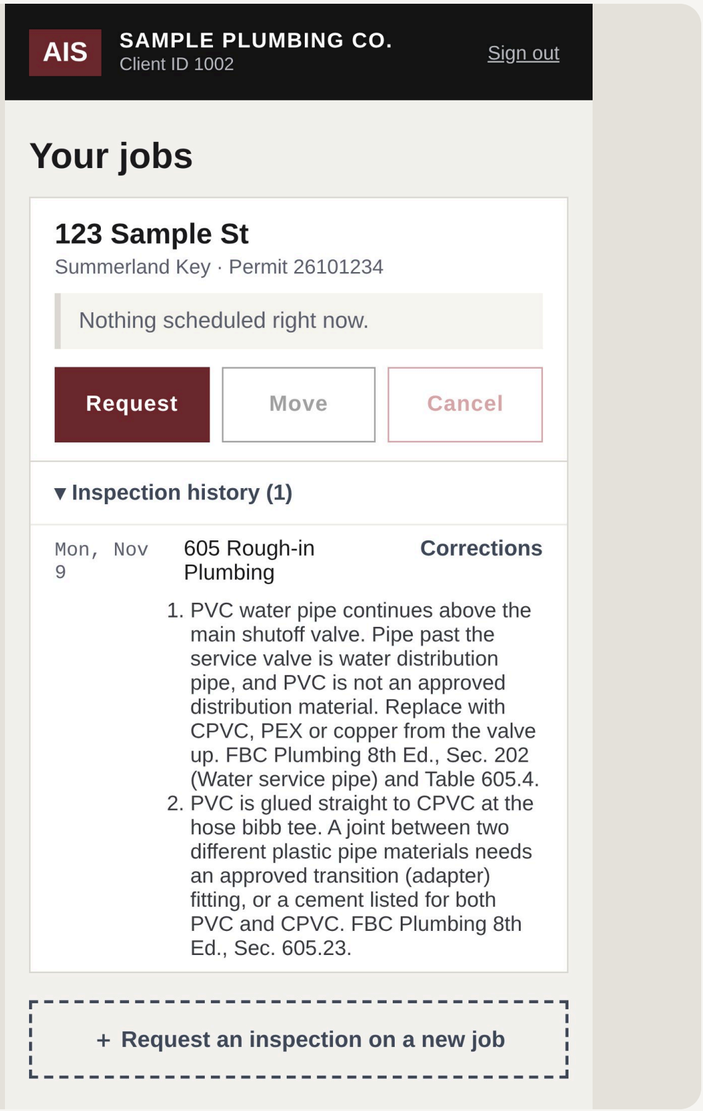

Past the service valve is distribution pipe. PVC isn't approved for it. Use CPVC, PEX or copper from the valve up.

FBC Plumbing 8th Ed. · Sec. 202 · Table 605.4

2. PVC glued to CPVC at the hose bibb

Two different plastics need an approved transition fitting, or a cement listed for both.

FBC Plumbing 8th Ed. · Sec. 605.23

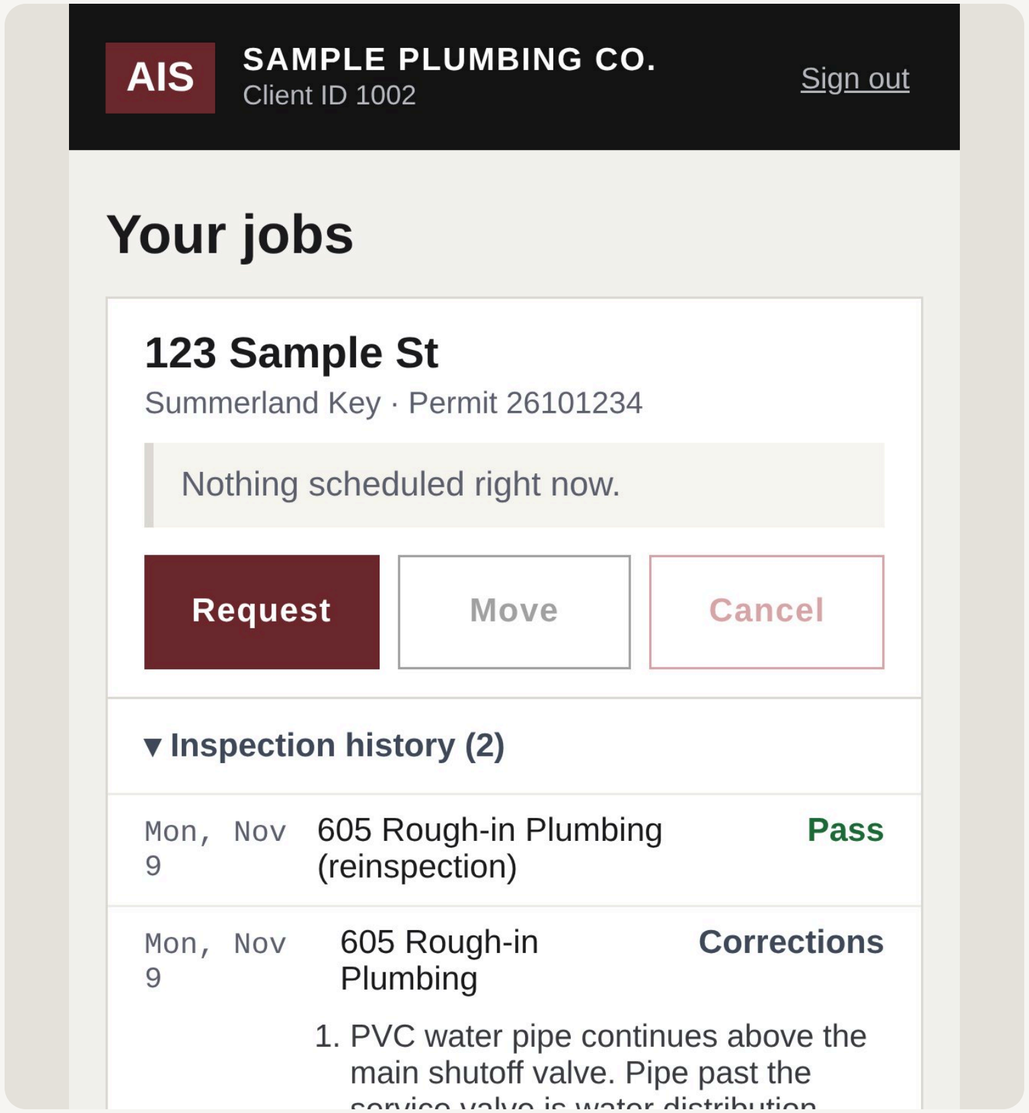

FIXED · REINSPECTION

Fix it, send a photo, get the pass the same day

Tap **Request**, pick the same inspection, add a photo of the fix. Same-day reinspections are at no charge.

The pass goes on top of the history, with the corrections kept underneath for the record.

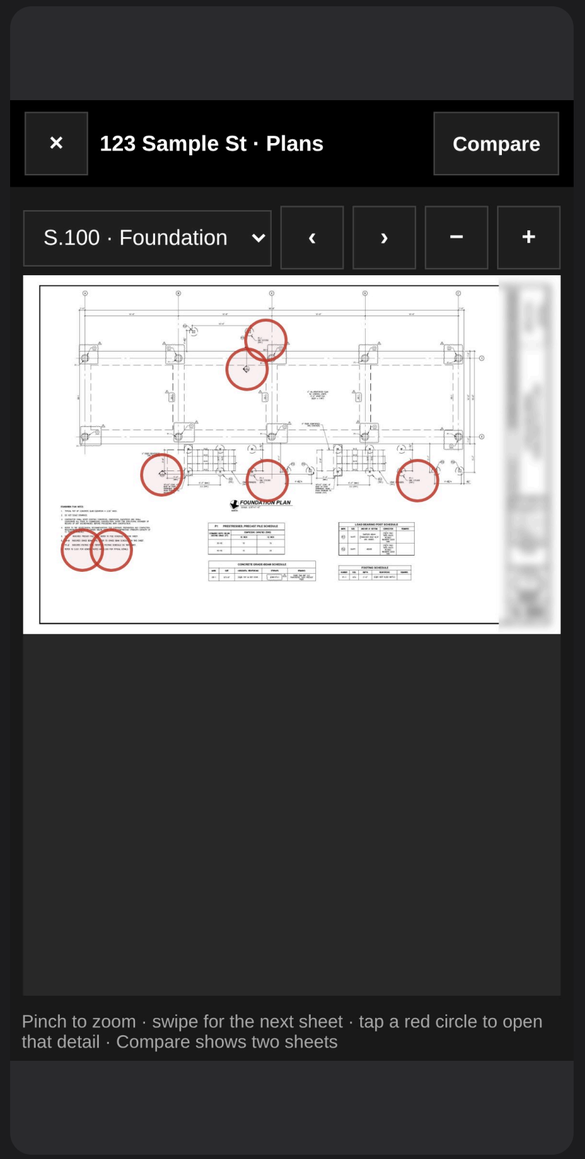

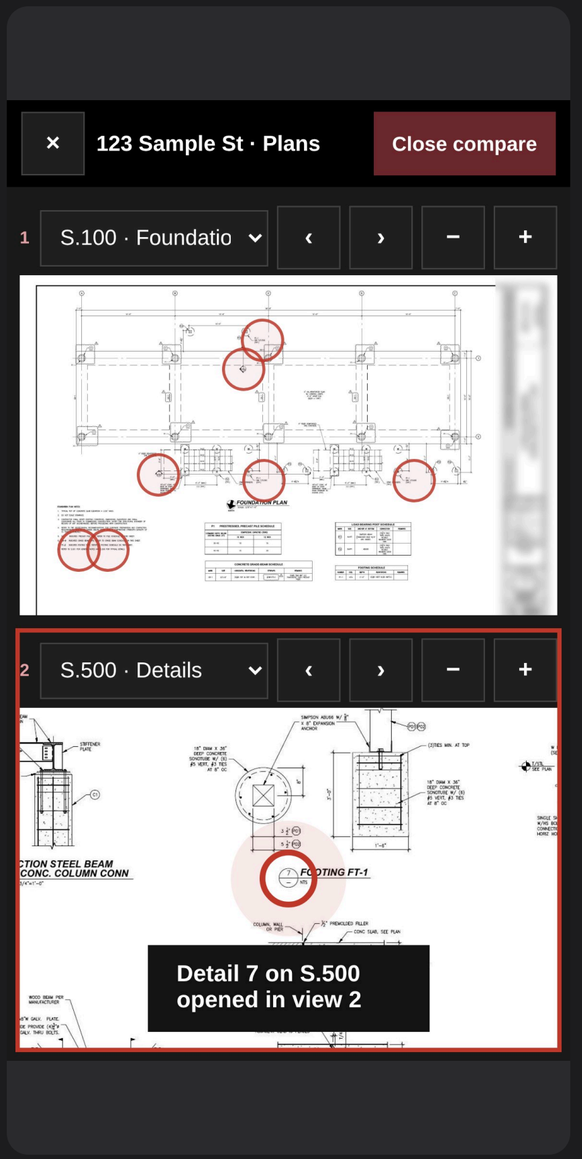

IN YOUR APP · PLANS

Your approved plans, in your pocket

- Every sheet on your permit, full screen
- Pinch to zoom, swipe to the next sheet
- Tap a red circle on a callout and the detail opens next to it
- **Compare** shows two sheets at once

On a call about a correction, we’re both looking at the same detail.

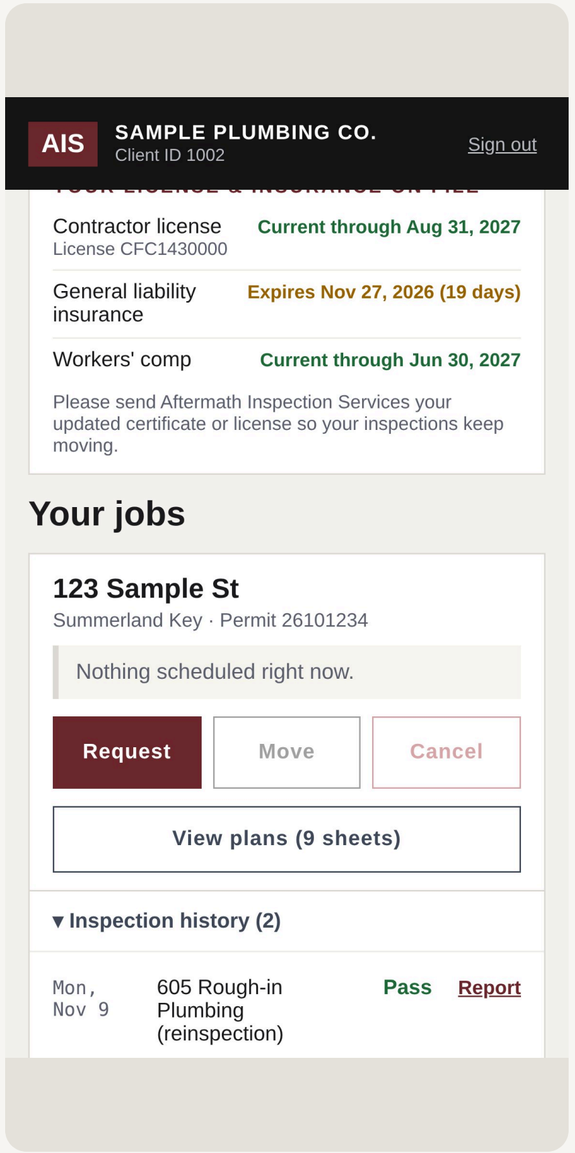

IN YOUR APP · REPORTS

Every inspection report, any time

Your inspection history shows every date and result. Tap **Report** on any line for the full signed report.

Corrections come with the code section and the photos. Show the owner, the super or the bank without calling the office.

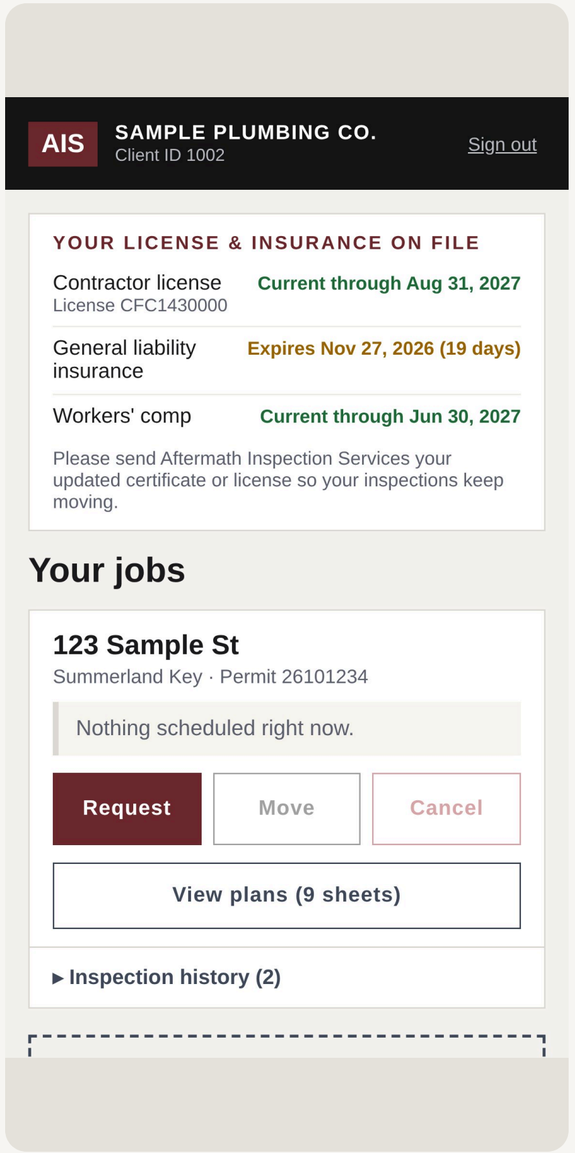

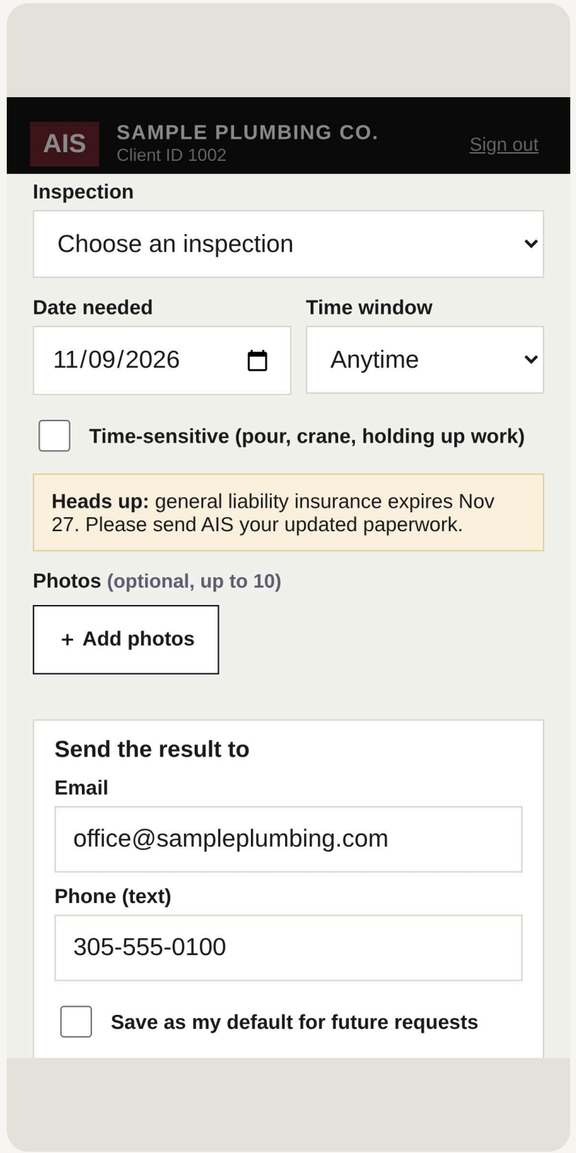

IN YOUR APP · LICENSE & INSURANCE

Never get caught with expired paperwork

Your license, liability and workers' comp dates sit at the top of your app. **Green** is current, **yellow** is 30 days out, **red** is expired.

Anything coming due shows up again every time you request an inspection, so it gets renewed before it holds up a job.

GETTING SET UP

Five minutes, and you’re in

1

I set up your company with a Client ID and PIN.

2

You sign in and put the app on your home screen.

3

When your permit comes out, I load the job. You request from day one.
